Annexure A

Conservation Works

The following list of Conservation Works is derived from Sections 10.4 and 10.5 of the Conservation Plan and *Kellerberrin Fire Station (Fmr) Conservation Works Recommendations* prepared by Laura Gray (March 2011).

Urgent Works (to be completed within 12 months of the Effective Date)

1. Thoroughly investigate for termites and fully treat all timber elements including the entire timber sub structure, stumps, floor sub structure, floor, and all other timber framework.
2. Undertake any works deemed necessary in response to recommendations arising from the thorough termite investigation.
3. Inspect the roof structures, ensure timber structures are in sound condition. Replace timber structural elements and battens as required.
4. A thorough roof inspection may reveal that resheeting the roof is not necessary in the short term. If that were the situation, re-secure sheets and replace sheets as required. However, if there is an extent of damaged sheeting, it is recommended that the entire building be reroofed. Short sheets of galvanised sheeting is the preferred option.
5. Pay particular attention to parapet and chimney flashings, reconstruct as required in galvanised materials compatible with the roof material.
6. Check the current perimeter drainage to ensure the correct gradients of the earth surrounding the building are in place and the rainfall is discharged away from the building. Undertake necessary works to remedy the existing situation.

Short term Works (to be completed within two years of the Effective Date)

7. Remove plantings on south side to improve drainage.
8. Replace all external timberwork that has deteriorated beyond repair with new material to match existing.
9. Remove loose paint to facade and repaint.
10. Rub back loose and flaking paint from all previously painted internal timber surfaces, stop where necessary and apply one primer coat and two coats of enamel paint.
11. To all external timber joinery, fascias, battens, and mouldings, remove loose & flaking paint, thoroughly prepare to key to existing painted surfaces, make good to damaged surfaces. Apply one coat of wood primer, one undercoat and two coats of enamel paint.
12. Secure any loose timber facade mouldings.
13. Check all windows and doors for proper operation. Make any necessary adjustments and repairs, and replace all sash cords, rollers and catches where necessary.
14. Remove paint from concrete threshold to facade, patch with an epoxy filler and re-paint with paving paint.
15. Maintain crack monitoring (to supplement, not supplant, structural engineering advice) until it can be established that differential movement has ceased or is insignificant. Measure quarterly and tabulate measurements incorporating quarterly rainfall figures from the nearest accurate rain gauge. Seek advice from a qualified structural engineer.
16. Reconstruct the timber frame to the front arched entry opening and fanlight glazing, using hardwood framing per existing.

Medium-term Works (to be completed within five years of the Effective Date)

17. Restore external stone walls as required, particularly the vertical cracking on the north wall. Use a high proportion of lime in the mortar mix, in consultation with conservation professional.
18. Restore the interior walls where the cracks are evident.
19. Consult with a conservation professional with regard to colour schemes or the painted surfaces on the interior and exterior.

Annexure B

Maintenance

The Programme below will form part of the maintenance regime for this place. The programme will be the responsibility of the Owner or the Owner's nominee. Should the property be sold the new proprietor shall nominate the person responsible for carrying out this maintenance schedule. The Heritage Council of Western Australia should be notified of any change of the person responsible.

This schedule is concerned with the significant heritage fabric and the presentation of the place. It does not aim to cover all the statutory requirements concerning plant and machinery. The required inspection of these items should form part of a broader more comprehensive schedule prepared by the proprietor or building manager.

This schedule should be regarded as provisional and should be adapted by mutual agreement to suit circumstance and experience. This schedule should be regarded as a minimum standard. The schedule should be adhered to in any period where the place is wholly or partially unoccupied.

It is not envisaged that structural monitoring will be required.

Should the place be subject to damage by fire, infestation, seismic or building activity or alteration of the foundation, an inspection of the building frame by a qualified structural engineer will be required and any recommendations implemented.

Periodic Maintenance Schedule

As needed:

- Keep grass and other vegetation on the perimeter of the house trimmed short.
- Maintain ground levels around the building to ensure that the masonry wall of the foundation is visible by 300mm in the clear.

Annually:

- Sweep chimneys and clean fireplaces (if in use).
- Inspect house and outbuildings for termites and other potentially damaging pests; treat as necessary.
- Inspect exterior painted timber for deterioration; repaint as necessary.
- Clean gutters and downpipes for free flow, prior to winter.
- Inspect for rising damp or water penetration and repair immediately as necessary.

Five Yearly:

- Inspect metal roofing, fixings, wall flashings, box gutters and downpipes for corrosion and repair as necessary
- Inspect and repair external glazing as necessary.
