Conservation Works

Urgent works (to be completed within 12 months of the Effective Date)

Short-term Works (to be completed within two years of the Effective Date)

2. Repair and restore external timber including all trims and fascias. Repair and replace with matching elements as required. Sand, prime and paint with good quality gloss enamel paints.
3. Check roof sheeting and repair or replace as required. Ensure that all replacement sheets are compatible with the existing roof sheeting. Do not place corrugated galvanized iron sheets adjacent to zincalume because these materials are not compatible and rust will develop at the point of contact. In the event that the whole of the roof sheeting is replaced liaise with the Department of Housing to ensure that the whole building is treated in the same manner.
4. Restore and paint external joinery including window and door frames and sashes.
5. If the building is to be no longer used as a post office, remove post office boxes from window and door openings and reinstate frames to original detail.

Medium-term Works (to be completed within five years of the Effective Date)

6. Conserve and repair external stonework. Do not use harsh processes to clean the stone. Repair joints using lime mortar only (no cement) and reinstate black tuck-pointing.
7. Check all plumbing, electrical and mechanical services to the building and replace or upgrade as necessary.

Long-term Works (to be completed within ten years of the Effective Date)

8. Implement recommendations for conservation of the internal fabric of the police station with works to adapt the place for ongoing use as a post office or future use. Issues include upgrade of the service areas in existing original cells, removal of internal fittings no longer required, restoration of internal walls and floors.
9. Implement interpretation features based on Policies 13.3 and 13.4 of the Conservation Plan, at page 122.

Annexure B

Maintenance

The Programme below will form part of the maintenance regime for this place. The programme will be the responsibility of the Owner or the Owner's nominee. Should the property be sold the new proprietor shall nominate the person responsible for carrying out this maintenance schedule. The Heritage Council of Western Australia should be notified of any change of the person responsible.

This schedule is concerned with the significant heritage fabric and the presentation of the place. It does not aim to cover all the statutory requirements concerning plant and machinery. The required inspection of these items should form part of a broader more comprehensive schedule prepared by the proprietor or building manager.

This schedule should be regarded as provisional and should be adapted by mutual agreement to suit circumstance and experience. This schedule should be regarded as a minimum standard. The schedule should be adhered to in any period where the place is wholly or partially unoccupied.

Should the place be subject to damage by fire, infestation, seismic or building activity or alteration of the foundation, an inspection of the building frame by a qualified structural engineer will be required and any recommendations implemented.

Periodic Maintenance Schedule:

As needed:

1. Keep grass and other vegetation on the perimeter of structures trimmed short.
2. Maintain ground levels around buildings to ensure that the masonry wall of the foundation is visible by 300mm in the clear.
3. Promptly remove graffiti.

Annually:

4. Sweep chimneys and clean fireplaces (if in use).
5. Carry out a termite inspection of the building and site and treat any area of termite infestation as soon as it is identified. Checking should include all floors, under-floor areas, timber joinery, framing, roof timbers etc.
6. Check all gutters and downpipes and ensure that they are clear and discharging to appropriate ground drainage systems. Check for signs of rust or leaks and repair or replace rainwater goods as required.
7. Inspect exterior painted timber for deterioration; repaint as necessary.
8. Ensure that there are no leaks from the roof. If leaks are identified, repair immediately using materials to match the existing. Where there is evidence of rust, treat the roof sheet as required to prevent further deterioration.
9. Check all walls for evidence of rising damp. If damp is found keep a record of the location and check at regular intervals. Do not attempt to address rising damp with cement or render as this will result in damage to the underlying original stone surfaces.
10. Check external stone walls for any signs or erosion of mortar joints. These should be repaired using lime mortar only (no cement) by a skilled tradesman who is able to match the details of adjacent mortar joints. Rough repairs are unsightly and can result in damage to adjacent stonework.
11. Check all doors and windows and door and window frames and ensure that there is no evidence of damage or deterioration. If damage is found repair immediately using like for like materials. Ensure the external joinery is sealed and is appropriately protected by good quality gloss enamel paints only.

12. Check all door furniture and repair or replace as required. Where original hardware remains, retain this, even where it is not operational.
13. Check all electrical and mechanical services to the building and repair as required in the normal manner.

Five yearly

14. Check all windows and repair any damage to glazing if and when it occurs using like for like materials. Glass to comply with the Building Code of Australia for all plain glass areas.
15. Inspect metal roofing, fixings, wall flashings, box gutters and downpipes for corrosion and repair as necessary.

Any damage resulting from wear and tear etc. to significant fabric should be identified during regular maintenance inspections and advice sought from a heritage architect or consultant. Inappropriate repairs can damage the heritage value of the element.
