#### 10. STATEMENT OF SIGNIFICANCE

Davies Park and Foundry Chimney, a culturally modified landscape containing a substantial and massively proportioned part of a furnace flue, oven ruin, donkey engine boiler, and other archeological material relating to Karridale Mill, has cultural heritage significance for the following reasons:

the foundry flue was constructed in c. 1883, by MC Davies shortly after he founded the mill at Karridale, and it was an integral part of the timber company's operation from its completion until the early twentieth century and is the only substantial evidence of the mill;

the remaining evidence of the industrial processes associated with timber milling in the late nineteenth and early twentieth century are amongst the few remaining of their type and therefore have rarity value; it is closely associated with MC Davies and his family, whose company developed the place, and after whom the site is now named Davies Park. The place is also associated with Millars' Karri and Jarrah Company, which owned and operated the mill following the amalgamation of 1902; and

the stone construction remaining section of flue is a finely constructed piece of Victorian industrial architecture.

The park entrance portal, stone construction barbecue, and fences to parts of the site perimeter, together with re-growth plant material have little significance.
